Instruction Tuning Vol. 1

Fuente: NLP News / Fecha: 04/10/2023

Prompt engineering

NLP and ML have gone through several phases of how models are trained in recent years. With the arrival of pre-trained models such as BERT, fine-tuning pre-trained models for downstream tasks became the norm. The increasing capabilities of ever larger models then enabled in-context learning via prompting. Recently, instruction tuning has become the newest method to make LLMs useful in practice. In this edition, we will cover some of the most popular datasets for instruction tuning. The next editions will cover the latest instruction datasets and instruction-tuned models. What is Inst...(+)

E-sports are more popular than traditional sports in Asia

Fuente: MIT Technology Review / Fecha: 04/10/2023

E-sports

They could be a major cultural export for China, but the government's ambivalence on gaming could compromise progress. It was probably the highest-stakes mobile game match that's ever been played. On the evening of September 26, 10 men from China and Malaysia sat on a stage in Hangzhou, China, each staring intensely into a phone. More than 4,000 people were in the arena's audience, cheering on the group of players who were barely adults, while potentially millions watched online or on TV. In 13 minutes, the Chinese t...(+)

Non gaming reaches its highest ever monthly hours watched on twitch in july 2023

Fuente: aStreamhatchet.com / Fecha: 20/09/2023

E-sports

Is there room for non-gaming content on live streaming platforms? Twitch is not only about Gaming anymore. Recent trends have shown the growth of Non-Gaming content during 2023, most of it can be attributed to the amount of special events that have happened during the year, and to the Just Chatting category. Also Sports have risen from the bottom of the ranks to consolidate itself as one of the top non-gaming categories during 2023 thanks to the disruptiveness of the Kings and Queens league. In 2023, the numbe...(+)

I think we have an answer on whether AIs will reshape work.... A lot of people have been asking if AI is really a big deal for the future of work. We have a new paper that strongly suggests the answer is YES. For the last several months, I been part of a team of social scientists working with Boston Consulting Group, turning their offices into the largest pre-registered experiment on the future of professional work in our AI-haunted age. Our first working paper is out today. There is a ton of important and useful nuance in the paper but let me tell you the headline first: for 18 different tasks selected to be real...(+)

How Will Generative AI Change the Video Game Industry?

Fuente: Bain.com / Fecha: 14/09/2023

E-sports

Executives see AI improving quality and speeding time to market but not alleviating the talent shortage. Generative AI is just beginning to have an effect on video games, but gaming industry executives believe that over the next 5 to 10 years, it will contribute to more than half of the video game development process. Bain spoke with gaming industry executives about the potential and the challenges of generative AI for their industry. Most have high expectations for generative AI and the machine learning it's based on, and they...

How to cite chatgpt

Fuente: Scribbr.com / Fecha: 15/05/2023

Prompt engineering

ChatGPT, the popular AI language model, is quite new. Educational institutions and style guides are still working out their policies on when and how content from the tool can be used and cited in academic writing. Guidelines are still evolving, so we provide formats based on what the different style guides have said about the issue so far. This article will be updated over time to reflect the latest guidelines as different authorities develop their recommendations. We also discuss when you should cite ChatGPT and whether ChatGPT itself can cite sources. How to cite ChatGPT in APA Style. Creat...

Microsoft Completes \$69 Billion Acquisition of Activision Blizzard Amid Regulatory Hurdles

Fuente: Hackernoon.com / Fecha: 15/10/2023

E-sports

After almost twenty months, the Internet Giant Microsoft has completed its deal to acquire Activision Blizzard for 69 billion dollars. The deal took this long because of the restrictions from the authorities of the Western countries, mainly the United States, the United Kingdom, and the European Union. The parliament and lawmakers of these countries were arguing that Microsoft would end the competition in the gaming industries after acquiring one of the most popular game studios, Activision Blizzard. Activision Blizzard is a...(+)

Prompt hub. Using llms to optimize your prompts

Fuente: Prompthub.us / Fecha: 15/09/2023

Prompt engineering

Who's better at writing prompts, humans or LLMs? I've found that a blend of human and LLM input works best. One thing I know for sure is that the way you instruct a model with a prompt is extremely important. Even single-word differences in a prompt can have an outsized effect. That's why this research from the folks over at Deepmind stuck out to me: Large Language Models As Optimizers. They developed a method called Optimization by PROMpting (OPRO) to help with the prompt optimization process. At its core, OPRO l...(+)

Photothermal properties and performance of hybrid carbon-paraffin/water emulsions

Fuente: Sciencedirect.com
Fecha: 09/10/2023

Hybrid-nanofluids

Solar thermal energy has attracted renewed research interest for its excellent energy efficiency among different types of solar technologies. However, the limiting factor of them all is the intermittent nature of solar radiation. To overcome this drawback, it is possible to store absorbed light in form of heat using emulsions with phase-change materials (PCMs) dispersed in solar nanofluids by combining the advantage of solar thermal storage characteristics of PCMs and the higher light absorption capacity of solar nanofluids. In this study, paraffin/water and hybrid carbon-paraffin/water emulsions with 5 ...(+)

Understanding prompt engineering may not require rethinking generalization

Fuente: Arxiv.org
Fecha: 06/10/2023

Prompt engineering

Carnegie Mellon University

Zero-shot learning in prompted vision-language models, the practice of crafting prompts to build classifiers without an explicit training process, has achieved impressive performance in many settings. This success presents a seemingly surprising observation: these methods suffer relatively little from overfitting, i.e., when a prompt is manually engineered to achieve low error on a given training set (thus rendering the method no longer actually zero-shot), the approach still performs well on held-out test data. In this paper, we show that we can explain such performance well via recourse to classical ...(+)

DSPy: Compiling Declarative Language Model Calls into Self-Improving Pipelines

Fuente: Arxiv.org
Fecha: 05/10/2023

Prompt engineering

Stanford University

The ML community is rapidly exploring techniques for prompting language models (LMs) and for stacking them into pipelines that solve complex tasks. Unfortunately, existing LM pipelines are typically implemented using hard-coded "prompt templates", i.e. lengthy strings discovered via trial and error. Toward a more systematic approach for developing and optimizing LM pipelines, we introduce DSPy, a programming model that abstracts LM pipelines as text transformation graphs, i.e. imperative computational graphs where LMs are invoked through declarative modules. DSPy modules are parameter...(+)

PeaTMOSS: Mining Pre-Trained Models in Open-Source Software

Fuente: Arxiv.org
Fecha: 05/10/2023

Prompt engineering

UNIVERSITY OF MICHIGAN

Developing and training deep learning models is expensive, so software engineers have begun to reuse pre-trained deep learning models (PTMs) and fine-tune them for downstream tasks. Despite the wide-spread use of PTMs, we know little about the corresponding software engineering behaviors and challenges. To enable the study of software engineering with PTMs, we present the PeaTMOSS dataset: Pre-Trained Models in Open-Source Software. PeaTMOSS has three parts: a snapshot of (1) 281,638 PTMs, (2) 27,270 open-source software repositories that use PTMs, and (3) a mapping betw...(+)

Promptbreeder: Self-Referential Self-Improvement Via Prompt Evolution

Fuente: Arxiv.org
Fecha: 28/09/2023

Prompt engineering

Popular prompt strategies like Chain-of-Thought Prompting can dramatically improve the reasoning abilities of Large Language Models (LLMs) in various domains. However, such hand-crafted prompt-strategies are often sub-optimal. In this paper, we present Promptbreeder, a general-purpose self-referential self-improvement mechanism that evolves and adapts prompts for a given domain. Driven by an LLM, Promptbreeder mutates a population of task-prompts, and subsequently evaluates them for fitness on a training set. Crucially, the mutation of these task-prompts is governed by n...(+)

Augmenting the double pipe heat exchanger efficiency using varied molar Ag ornamented graphene oxide (GO) nanoparticles aqueous hybrid nanofluids

Fuente: Frontiersin.org
Fecha: 28/07/2023

Hybrid-nanofluids

The optimization of heat transfer in heat exchanging equipment is paramount for the efficient management of energy resources in both industrial and residential settings. In pursuit of this goal, this empirical study embarked on enhancing the heat transfer performance of a double pipe heat exchanger (DPHX) by introducing silver (Ag)-graphene oxide (GO) hybrid nanofluids into the annulus of the heat exchanger. To achieve this, three distinct molar concentrations of Ag ornamented GO hybrid nanoparticles were synthesized by blending GO nanoparticles with silver nitrate at molarities of 0.03 M, 0.06 M...(+)

Using Gameplay Videos for Detecting Issues in Video Games

Fuente: Arxiv.org
Fecha: 27/07/2023

E-sports

Context. The game industry is increasingly growing in recent years. Every day, millions of people play video games, not only as a hobby, but also for professional competitions (e.g., e-sports or speed-running) or for making business by entertaining others (e.g., streamers). The latter daily produce a large amount of gameplay videos in which they also comment live what they experience. But no software and, thus, no video game is perfect: Streamers may encounter several problems (such as bugs, glitches, or performance issues) while they play. Also, it is unlikely that they explicitly report such issues to develop...(+)

Enhanced photothermal conversion performance of MWCNT/SiC hybrid aqueous nanofluids in direct absorption solar collectors

Fuente: Sciedirect.com

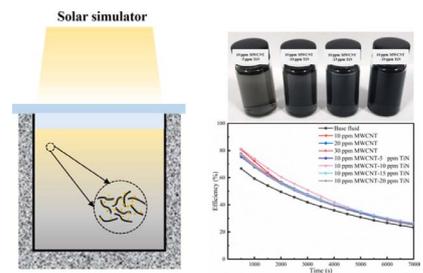

Fecha: 12/07/2023

Hybrid-nanofluids

湖南大学
HUNAN UNIVERSITY

Nanofluids containing light-absorbing nanoparticles are potential alternative working fluids in solar collectors. In this work, a novel hybrid aqueous nanofluid containing multi-walled carbon nanotubes (MWCNTs) and SiC nanoparticles is prepared to improve the photothermal conversion ability of working fluids. The hybrid nanofluid overcomes the disadvantages of one-component nanofluids and achieves good solar absorption on the merit of the complementary optical property of MWCNTs and SiC nanoparticles. The prepared nanofluids show excellent stability due to the hydroxyl functionalizatic...(+)

Investigation on the Lubrication Performance of γ -Al₂O₃/ZnO Hybrid Nanofluids for Titanium Alloy

Fuente: Preprints.org

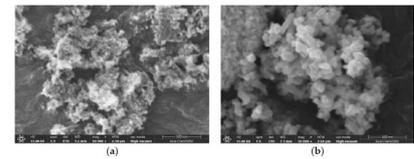

Fecha: 09/07/2023

Hybrid-nanofluids

北京理工大学
BEIJING INSTITUTE OF TECHNOLOGY

Titanium alloys are difficult to machine and have poor tribological properties. This paper investigates the lubricating performance of γ -Al₂O₃/ZnO hybrid nanofluids for Ti-6Al-4V. The pure and hybrid nanofluid are compared, and the effects of γ -Al₂O₃/ZnO ratios are studied. The results show that γ -Al₂O₃/ZnO hybrid nanofluids outperform pure nanofluid in terms of lower friction coefficients and better surface quality. Moreover, the hybrid nanofluid with a mass ratio of Al₂O₃ to ZnO of 2:1 demonstrates the best lubrication performance with a reduced friction coefficient of up to 22.1% comp...(+)

Google Research

Prompt engineering is a technique that involves augmenting a large pre-trained model with task-specific hints, known as prompts, to adapt the model to new tasks. Prompts can be created manually as natural language instructions or generated automatically as either natural language instructions or vector representations. Prompt engineering enables the ability to perform predictions based solely on prompts without updating model parameters, and the easier application of large pre-trained models in real-world tasks. In past years, Prompt engineering has been well-studied in natural language pr...(+)

Unifying Large Language Models and Knowledge Graphs: A Roadmap

Fuente: Arxiv.org
Fecha: 20/06/2023

Prompt engineering

Large language models (LLMs), such as ChatGPT and GPT4, are making new waves in the field of natural language processing and artificial intelligence, due to their emergent ability and generalizability. However, LLMs are black-box models, which often fall short of capturing and accessing factual knowledge. In contrast, Knowledge Graphs (KGs), Wikipedia and Huapu for example, are structured knowledge models that explicitly store rich factual knowledge. KGs can enhance LLMs by providing external knowledge for inference and interpretability. Meanwhile, KGs are difficult to construct and evc...(+)

Enhancing heat transfer in solar-powered ships: a study on hybrid nanofluids with carbon nanotubes and their application in parabolic trough solar collectors with electromagnetic controls

Fuente: Nature.com
Fecha: 18/06/2023

Hybrid-nanofluids

The aim of this research is to explore the use of solar-powered ships (SPS) as a means to reduce greenhouse gas emissions and fossil fuel dependency in the maritime industry. The study focuses on improving the heat transfer efficiency in SPS by employing hybrid nanofluids (HNF) containing carbon nanotubes (CNTs). Additionally, a novel approach utilizing renewable energy and electromagnetic control is proposed to enhance the performance of SPS. The research implements the non-Newtonian Maxwell type and Cattaneo-Christov heat flux model in parabolic trough solar collectors ...(+)

Hybrid-nanofluids

جامعة الملك فهد للبترول والمعادن
King Fahd University of Petroleum & Minerals

This study focuses on the thermal and rheological properties of a hybrid fluid consisting of Titanium Dioxide/Chemically functionalized Multi-Walled Carbon Nanotubes (TiO₂ / CF-MWCNTs) suspended in distilled water (DW) for use in flat plate solar collectors applications. The optimal hybridization ratio of CF-MWCNTs: TiO₂ was 40:60. To evaluate thermal efficiency, solar collector tests were conducted using varying flow rates "2LPM, 3LPM, and 4 LPM" according to the ASHRAE'93-2010' principle. The study examined the effects of various weight percentages of TiO₂/CF-MWCNTs add up to the DW as wo...(+)

Qualitative modeling of solar panel cooling by nanofluid jets: Heat transfer and second law analysis

Fuente: Sciencedirect.com
Fecha: 01/05/2023

Hybrid-nanofluids

The present paper highlights heat transfer and entropy generation due to mixed convection for an inclined channel. The channel is heated by its upper wall and cooled by two jets of nanofluids penetrating through its lower wall. The studied configuration is chosen to model, in qualitative way, a cooling system for photovoltaic panel. The set of partial differential equations that governing the flow was numerically solved using COMSOL software. Effects of the inclination angle of the channel, Reynolds number and nanoparticles fraction, on heat transfer, hydrodynamic and created entropy are examined...(+)

Using artificial neural networks to ask 'why' questions of minds and brains

Fuente: Cell.com
Fecha: 17/01/2023

Prompt engineering

Understanding the mind and brain requires determining not only how they work, but why they work the way they do. We argue that artificial neural networks (ANNs) provide a new method for addressing 'why' questions about the brain. If an ANN optimized for a given task spontaneously produces a particular phenomenon previously observed in humans, but optimization for other tasks does not, that suggests that the phenomenon may result from optimization of the brain for that same task. We review phenomena in vision and audition (e.g., specific illusions), and of cortical organization (e.g., specializations for ...(+):

An empirical analysis of compute-optimal large language model training

Fuente: Openreview.net
Fecha: 13/01/2023

Prompt engineering

We investigate the optimal model size and number of tokens for training a transformer language model under a given compute budget. We find that current large language models are significantly undertrained, a consequence of the recent focus on scaling language models whilst keeping the amount of training data constant. By training over 400 language models ranging from 70 million to over 16 billion parameters on 5 to 500 billion tokens, we find that for compute-optimal training, the model size and the number of training tokens should be scaled equally: for every doubling of model size the r...(+):
